METHOD FOR DISPLAYING LEVEL OF ANALOG SIGNAL ON LED

Representative drawing

(57) Abstract:

The level of the analog signal is converted into the digital signal with using the pulse width modulation, and is displayed on the LED. The circuit comprises a PWM converter (100) for converting the analog signal to the PWM signal, a microcomputer (30) for clearing or increasing the counter according to the value of the PWM signal, a LED driver (40) for driving the LED, and a switching section (50) operated by the pulse width control signal from the microcomputer.
